

Applying Inheritance: Single-level Displays and Repurposeable Metadata

CORY NIMER

Abstract: This poster examines a recently-completed finding aid database developed by the L. Tom Perry Special Collections, which uses single-level displays and explicitly inherited information for presenting archival information. Similar display environments, such as PLEADE and ICA-AtoM, will also be reviewed. Discussion will focus on adherence to standards and encoding practices required to enable such displays, and the potential reuse of descriptive information permitted by these practices.

About the author:

Cory L. Nimer is the Manuscripts Cataloger and Metadata Specialist for the L. Tom Perry Special Collections at Brigham Young University. He earned a master's degree in history at Sonoma State University and a master's in library and information science at San José State University. At the Perry Special Collections he is responsible for EAD review and MARC cataloging as well as metadata development for associated digital projects.
